**DESCRIPTION:** One Ceiling Fan & Light, 3 Speed Remote Control

**ELECTRICAL SPECS:** 120 Volts, 60 Hertz, Fan 1.0 amp, Light Rating 250W Incandescent or Halogen

**FAN MODELS USED:** Must use with TR20 Hand-Held Remote or the C21 Wall Control or Both  
See Catalog or visit our website [www.fanimation.com](http://www.fanimation.com) for more information

***Be sure the electricity to the fan is turned off!***

### 1. Removing the Switch Housing:

Remove the original switch housing from the fan by unscrewing the three screws and unplugging the connector (Figures 1 & 2).

### 2. Removing the Receiver Unit:

Carefully, slide the remote Receiver from the Switch Cap Housing, and locate the code switches on the underside of the receiver unit (Figure 3).

### 3. Setting the Receiver Code:

The remote unit has 16 different code combinations. It may be necessary to test a couple frequency code settings to improve signal reception and/or eliminate interference from other remote control household items. Multiple fans should have different code settings to allow independent fan control. To set the code, slide code switches to the same positions as is set on your C21 or TR20 transmitter(s) (Figure 3).

### 3. Installing Receiver in Switch Cap Housing:

Slide remote Receiver into the Switch Cap, connect the plug from the fan motor assembly into the socket located in the receiver unit (Figure 3 & 4).

### 4. Installing the Switch Cap Housing:

Slide the assembled Switch Cap Housing over the Switch Cap Base by installing and tightening the three screws (Figure 5).

## **WARNING**

Check to see that all connections are tight. To avoid possible electrical shock, make sure that the electrical wires are completely inside the switch housing and not pinched between the switch cap base and switch housing.
